# Figures

Figure 1. Schematic of a Backwards Blocking experimental trial. The upper-right portion of the figure shows the backwards blocking event as it unfolded across time. The lower-left portion of the figure shows the three objects and the text, "Is this one a blicket?" above each object across time.
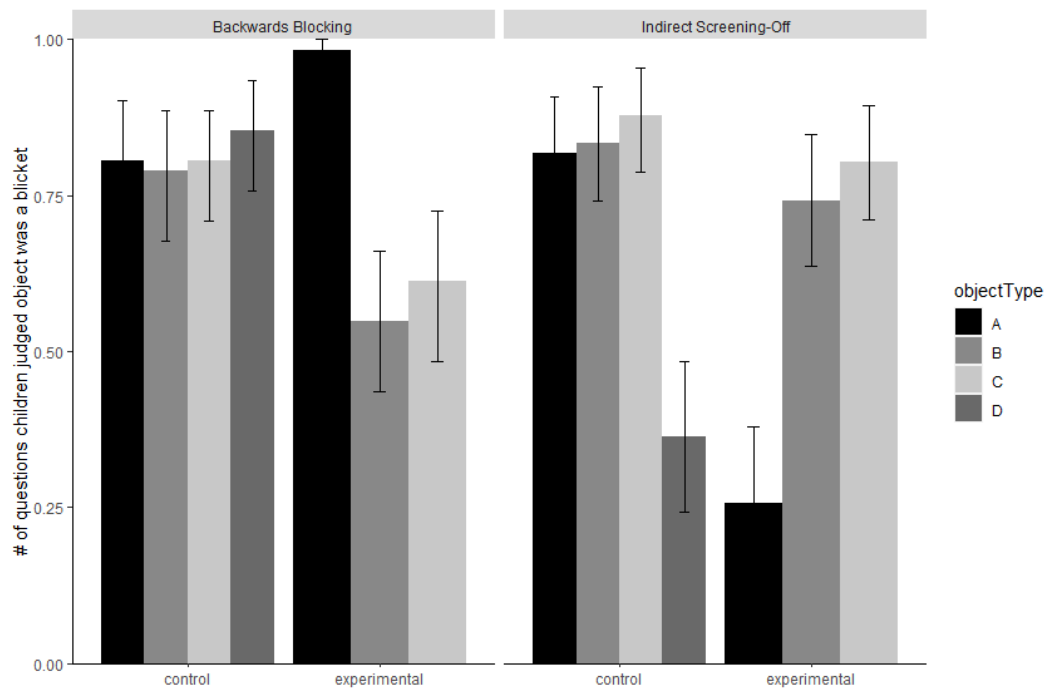

Figure 2. Participants' responses expressed as percentages to whether each object was a blicket across the conditions and trial types. Bars show standard error.
Figure 3. The participants' responses expressed as percentages to whether each object was a blicket across the conditions and trial types. Bars show standard error.
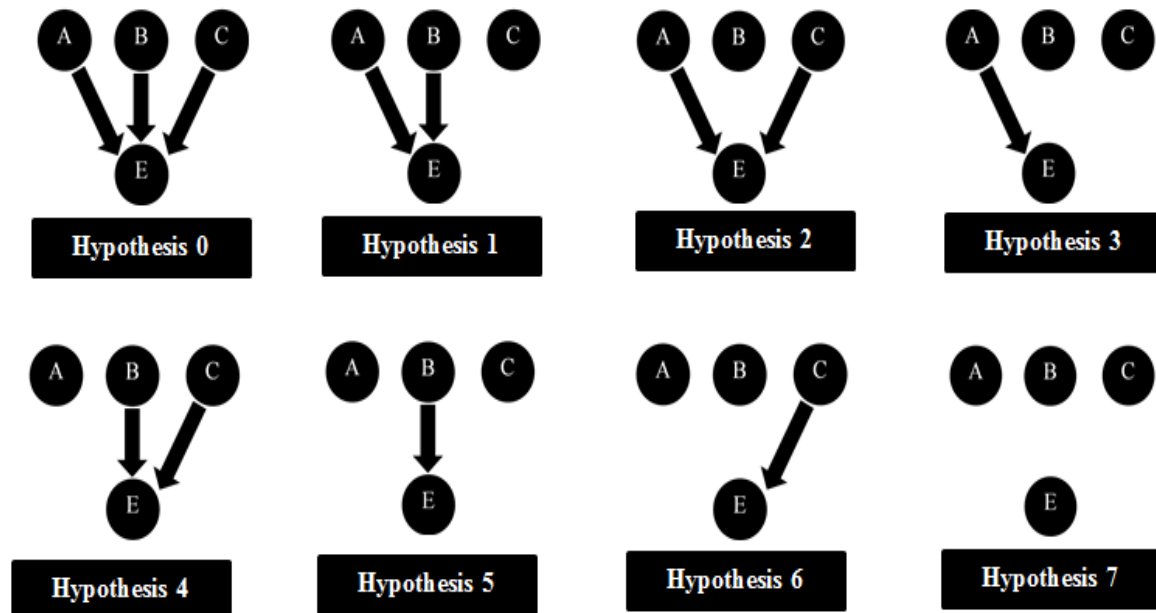

Figure 4. The eight different causal hypotheses indicating the possible causal relations for a causal event that involves three objects and one blicket detector. *A*, *B*, and *C* correspond to the three objects that were used on the machine and *E* indicates the activation of the machine.

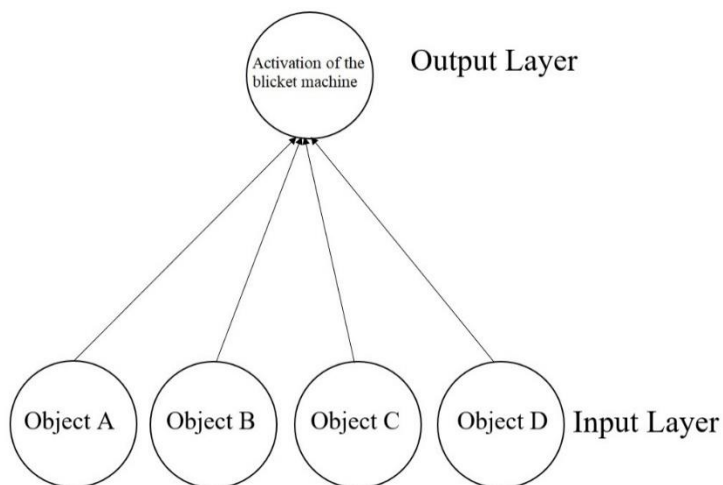

Figure 5. The connectionist model used to simulate Experiment 1.
